

Yohan Boogaert - Rust Software Developer

I started working with Rust in 2020 at [RustMinded](#), where I built a strong foundation in the language and the open-source ecosystem. Since then, I've built Rust software across backend, systems, and developer tooling in both product and consulting environments. Along the way, I've gained practical experience with JavaScript and TypeScript in collaborative teams, and I continue to contribute to open-source projects while using Linux as my primary development platform.

You can find me on [GitHub](#) and [Mastodon](#). You can also send me an [email](#).

Experiences

exp01 2020-current Rust Developer role at RustMinded, evolving into consulting through open-source collaboration and production-focused engineering on Rust software.

exp02 2022 Freelance mission as a Rust Developer at Cumul.io (now Luzmo), contributing to a Rust rewrite of a data analytics query engine to improve performance and service interoperability in an AWS microservices environment.

exp03 2022-2025 Freelance mission as a Rust Developer at Ystorian, working on a cybersecurity platform that gathers BIOS, kernel, OS, and network information in parallel to assess vulnerabilities and compliance across multiple systems.

exp04 2014-2020 Multiple jobs with hands on the wheel (emergency response driver, airport shuttle, taxi, ...).

Personal Project

cargo_flow A CLI tool to help manage Rust project workflows efficiently. [\[Repository\]](#)

cargo_temp A CLI tool to create temporary Rust projects with pre-installed dependencies for faster prototyping and experiments. [\[Repository\]](#)

create_process_w A Windows process-management library with an API inspired by `std::process`, built on top of the Win32 API. [\[Repository\]](#)

ratatui_auto_grid Simple auto-grid layout utility for ratatui TUI applications. [\[Repository\]](#)

readme_svg_stats Stats generator for GitHub profile README. [\[Repository\]](#)

xtask_no_warnings Silence warnings in xtask-based builds without invalidating the dependency cache. [\[Repository\]](#)

OSS Contributions

CargoGenerate A developer tool for bootstrapping new Rust projects from existing git templates. [\[Repository\]](#)

Chrono Date and time library for Rust. [\[Repository\]](#)

Gptman A GPT manager that can copy partitions between disks. [\[Repository\]](#)

ImplicitClone Immutable types and an `ImplicitClone` trait similar to `Copy`. [\[Repository\]](#)

Mbrman A MBR partition management in Rust. [\[Repository\]](#)

RustBookFr French translation of “The Rust Programming Language”. [\[Repository\]](#)

Sysinfo A system information library covering processes, CPUs, disks, components and networks. [\[Repository\]](#)

ThirdIFrontend Third-I, a camera project designed to replicate hearing and point of view. [\[Repository\]](#)

Topojson TopoJSON bindings and utilities for Rust. [\[Repository\]](#)

XtaskWasm Customizable xtask-based commands for WASM projects. [\[Repository\]](#)

XtaskWatch Customizable xtask-based watcher helper. [\[Repository\]](#)

Yewprint A port of `blueprintjs` to Yew. [\[Repository\]](#)

Non-technical Skills

ContinuousIntegration Continuous Integration workflows with [GitHub Actions](#).

OssProjectMaintenance Open-source project maintenance, including releases and iterative updates.

ProjectOrganisation Project organisation using [GitHub Project](#) and repository [settings](#).

WebDeployment Web application deployment.

Technical Skills

FRAMEWORKS Yew, Rocket, Axum, Actix, Tokio, sqlx, Ratatui.

OS NixOS, Arch Linux, macOS, Windows.

PROGRAMMING_LANGUAGES Rust, Bash, HTML, CSS, JavaScript, TypeScript, Python, C.

SPOKEN_LANGUAGES French (Native), English (Professional Proficiency), Dutch (Basic).

TECHNOLOGIES Git, WebAssembly, CLI, terminal UI, cross-platform development, systems, web, backend.

Autodidact

Enthusiast
